

key points

PERSPEX® VISION

Perspex® Clear Vision

Perspex® Clear Vision is a transparent product which gives pin point clarity to the projected image and has a glossy surface on both sides of the sheet. When the image is not being projected, the screen is clear and completely unobtrusive, allowing customers and visitors to both look at and look through the screen.

Perspex® Hi Vision

Perspex® Hi Vision is a smooth opaque sheet which offers excellent clarity and brightness of image. And if you require a subtle, opaque screen when not projecting the image, or need to hide illumination points with a greater degree of certainty then Perspex® Hi Vision is the best choice for you.

Key Selling Points

- ❑ Two grades to meet different customer requirements
- ❑ Excellent clarity for super sharp images
- ❑ Can be used to create flat or curved screens for optimum use of floor space
- ❑ Lightweight screens which are easy to install
- ❑ 3m x 2m sheet size for larger high impact images
- ❑ Extremely hard wearing and durable for longer life screens
- ❑ Guaranteed Perspex® quality
